

Environmental Sustainability Details

Fieldmasters Synthetic Grass is one of the most well-known and trusted wholesale manufacturers in the industry and a leader in environmental solutions. Our products are the results of years of R&D, and reflect our desire to offer eco-friendly solutions.

Fieldmasters Synthetic Grass high-performance turf is specially treated to resist the elements and remain green for a lifetime of maintenance free beauty and enjoyment. It is uniquely designed to withstand extreme temperatures in hot, cold, wet and dry climates and stand up to even the heaviest amount of foot traffic.

Our products are made with fibers that are lead free and are designed with safety, durability, aesthetics, and environmental sustainability in mind. With proper care, your **Fieldmasters Synthetic Grass** products can last 10-15 years! That's more than a decade without mowing, watering or fertilizing! And it's 100% recyclable!

Many **Fieldmasters Synthetic Grass** products are recyclable... thanks to our unique, all polyolefin DuraFlo backing system. DuraFlo is soft and pliable. It resists contraction and expansion and will not clog like products that use perforations for drainage. The unitary surface helps serve as a weed barrier.

We challenge you to find a better line of environmentally sustainable products.
